

## MOBILE APPLICATION PENETRATION TESTING

### GREAT VALUE MOBILE APP PENETRATION TESTING

Mobile Apps are now vital for business operations. Apps can be complex and development often needs to be completed quickly. Responding to a competitive market.

Rapid development brings risk. Risk of introducing security weaknesses that provide hackers with access to confidential customer and financial data.

Penetration Testing finds those weaknesses before being exploited by criminals.

On contacting us, we can provide clear advice on what needs to be tested. A Mobile App is often just a front-end user interface providing access to a cloud-based service. We help you determine what to include. What presents most risk.

Mobile App Penetration Testing needs to be both flexible and thorough to identify these weaknesses. It needs to be able to respond quickly. To deliver an assessment that meets tight development deadlines.

We are ready to test when you need us.

Testing is low impact. Technology that we review is treated with great care to ensure there is no disruption to service.

Results are gathered and delivered in easy to understand reports with clear guidance on fixing and what to do next.

Penetration Testing should be affordable. From the simplest to most complex of networks, our testing packages meet all budgets.

“ We continue to find Ambersail and its penetration test team professional and capable. Costs are obviously a factor when choosing suppliers, so to use a company that provides such a high quality service with competitive pricing, is a real advantage.

**Network Manager, Counter Solutions.**

”

- ✓ Help on what to test if you need it.
- ✓ Easy to understand reports with clear advice.
- ✓ UK based team. Working across the world.
- ✓ Performed by experienced, qualified CREST test engineers.

## HOW WE TEST YOUR MOBILE APPS

### ! DISCOVERY

A thorough assessment of how the App is built and how it communicates. This gives our test team a strong indication of where time will be best spent in identifying and exploiting vulnerabilities..

### 👍 ASSESSMENT

A detailed analysis of key functions such as authentication and cryptography. Such services can provide direct access to customer data. Repeated attempts are made to intercept valuable data assets.

### 🔍 EXPLORATION

Exploiting identified weaknesses. Going deeper in to the assessment, even as far as source-code inspection where available. This enables subtle defects to be located and exploited in a way that is not possible from static analysis alone.

### WHAT YOU GET FOR YOUR MONEY

As soon as you contact us, we can provide advice on what needs to be tested. We will take time to listen to your concerns.

Our test team will guide you on what to expect and the best approach to identifying weaknesses. We always aim to get best value for money for our clients.

Testing will be performed by experienced engineers. A team of experts that has tested a wide range of applications and supporting networks over many years.

You can expect reports with findings and what to do next that are easy to understand. Feel free to pick up the phone and ask us questions. You will speak to a real person who understands testing.
