

PENETRATION TESTING

GREAT VALUE TESTING DELIVERED BY EXPERTS

Businesses now see penetration testing as an essential part of protecting their networks and applications, by identifying and removing weaknesses before they can be exploited by criminals, thereby protecting confidential business and customer data.

But it is not just about doing the right thing. Penetration testing is an essential task to meet industry standards such as the ISO 27001, PCI DSS and Cyber Essentials.

And if that is not enough, UK and EU law requires full disclosure of any personal data breach. In short, the cyber security stakes have never been higher for business.

Testing is performed by experienced engineers, getting under the hood of technology and really understanding how things work. Discovering where weaknesses lie. Working out how they can be fixed.

Advice and information on removing problems is as important as finding weaknesses. Our reports are clear and understandable. We speak your language.

Penetration Testing should be affordable. Our testing packages are designed to meet budgets for large and small companies.

Testing is low impact. We assess both live and development environments. Each is treated with great care.

Flexibility is important. We are ready to test when you need us.

“ Years of experience have taught me that it's not easy to find a Pen Testing service which provides insightful advice in an engaging way, whilst providing value for money. Discovering Ambersail has certainly proven to be the exception that proves the rule! I won't be looking elsewhere in a hurry.

Head of ICT - Hillarys Blinds

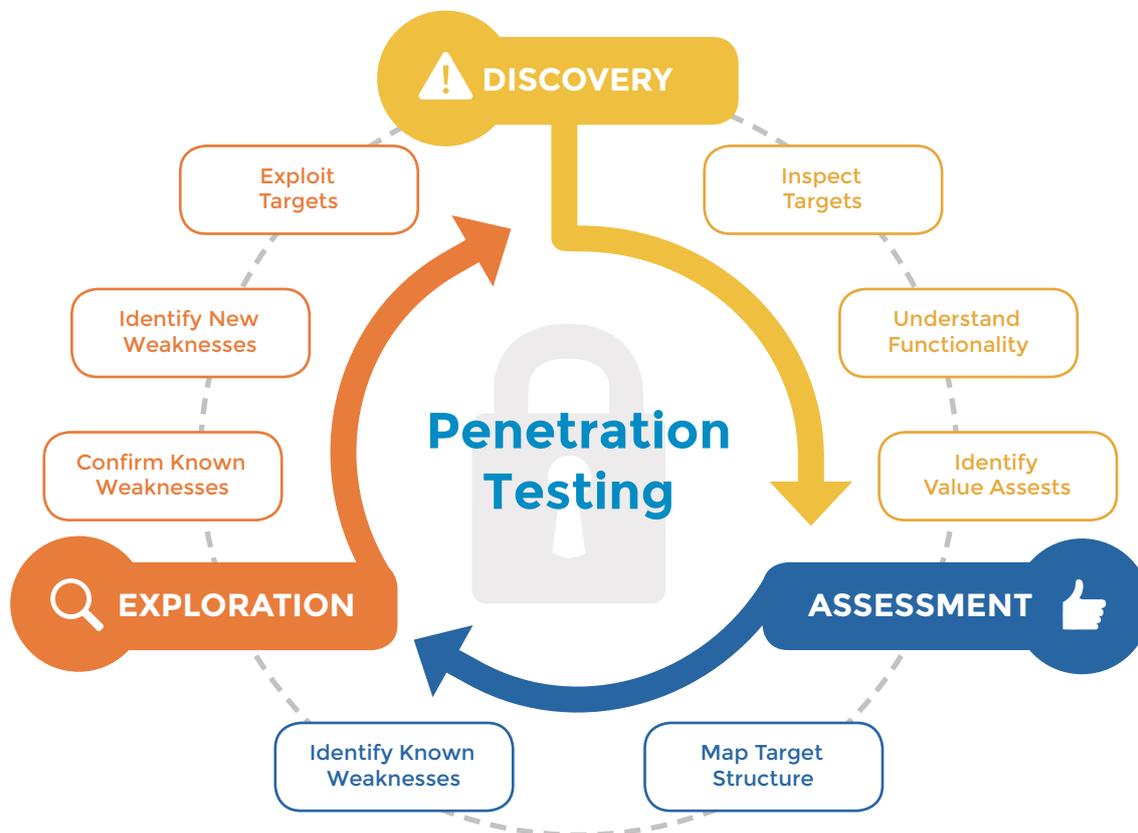

FEATURES

- ✓ Competitively priced, great value.
- ✓ Used by large and small companies.
- ✓ UK based team, working across the world.
- ✓ Driven by experienced, qualified engineers.
- ✓ Results focussed - understand how to fix problems.
- ✓ Meets compliance requirements - Examples include GDPR, PCI DSS and Cyber Essentials.
- ✓ Flexible - testing at times to suit you.

THOROUGH, COMPREHENSIVE TESTING

! DISCOVERY

Forming a deep understanding of what technology needs to be tested. How it functions. What sensitive data is being processed or stored. How connections are made to other networks.

👍 ASSESSMENT

With a detailed analysis of networks, we now shape and craft specific tests. Understanding the technology that is being used enables us to select well known security flaws.

🔍 EXPLORATION

Applying technical experience and the acquired knowledge of the test network, our engineers can now get to work crafting manual tests. Once designed and assembled, we can comprehensively assess the security of a network.

WHAT YOU GET FOR YOUR MONEY

From the moment you contact us, we start to help you.

Getting best value for money from your test. Determining exactly what needs to be tested.

You can be confident that testing will be performed by real people. A team of experts that has experience of testing large and small organisations right across the world.

You will receive results that you will understand. Clear detail on what we have found and what to do next. You can pick up the phone and ask us questions. You will speak to a real person who understands testing.

Our testing packages include further testing to confirm security fixes have been applied. We stay with you every step of the way.
